Development Report – Municipality Tax Calculation

Feature: Municipality Tax
Branch: feature/payment-options-and-cancellation-policy
Date: 5 December 2025
Status: ✅ Completed

1️⃣ Implemented Changes (Municipality Tax)

Backend (.NET)

PublicRoomType.cs:

- Added new property:
  MunicipalityTaxPercentage (decimal 5,2)
- Municipality tax is calculated on:
  (Base Price + View Price) *before* applying VAT.

2️⃣ Pricing Calculation Logic

Pricing Components:

- **BasePrice**: Basic room price
- **ViewPrice**: Additional price for room view
- **MunicipalityTaxPercentage**: Municipality tax percentage
- **VAT**: 15%

🧮 Calculation Steps:

1. **Room base price before taxes:**

```
roomBase = basePrice + viewPrice
```

2. **Municipality tax amount:**

```
municipalityTaxAmount = roomBase * (municipalityTaxPercentage / 100)
```

3. **Price after municipality tax:**

```
priceAfterMunicipalityTax = roomBase + municipalityTaxAmount
```

4. **VAT calculation (15%):**

```
vatAmount = priceAfterMunicipalityTax * 0.15
```

5. **Final price shown to the customer:**

```
finalPrice = priceAfterMunicipalityTax + vatAmount
```

3️⃣ Frontend (Angular)

public-booking-form.component.ts

- Integrated the new municipality tax calculation into the pricing logic.
- Updated displayed values to include:
  - Base price + view price
  - Municipality Tax
  - VAT
  - Final Price (all-inclusive)

public-booking-form.component.html

- Displaying price breakdown clearly:
  - (Base Price + View Price)
  - Municipality Tax
  - VAT
  - Final Price

Achieved Benefits

✓ Accurate and compliant municipality tax calculation
✓ Transparent and clear pricing breakdown for customers
✓ VAT shown separately for clarity
✓ Enhanced user experience with detailed tax visibility
